

The Arctic, despite its seemingly isolated location, is connected to all of us. *Arctic Voices* will take you on a journey to this fascinating and changing region.

The Arctic is more than just snow: it is land, water, and ice and home to people and wildlife. It is also the front line for our changing climate.

Learn about its inhabitants and their interdependence on an increasingly vulnerable ecosystem. Examine the transformations happening there from a scientific and global perspective. Discover a colorful land that's actually closer to your own backyard than you think.

## Introductory Experience

*Arctic Voices* provides you with the opportunity to explore, and perhaps ultimately be inspired to protect, this vulnerable and special region of our planet. Challenge your perceptions of the Arctic through thought-provoking imagery, and study a circumpolar map to appreciate the immensity of the Arctic.

## My Connection to the Arctic

Realize that your connection to the Arctic is perhaps greater than you think. Explore how the Arctic affects global systems and influences the weather you experience. Learn about scientists engaged in Arctic research, and how science and traditional knowledge are helping to increase our understanding of the Arctic

## Arctic Animal Adaptations

Explore life in the Arctic and the wondrous ways in which wildlife survive in the extreme conditions. Interpret the behaviors of Arctic animals and examine real specimens to find out more about their survival techniques. Take the interactive challenge to mimic Arctic animals by pushing, pouncing and hopping. Learn about the majestic polar bears: their long travels on the ice, how they survive extremely cold temperatures and how their lives are being impacted by a warming climate.

## Land, Water and Ice

The physical landscape of the Arctic holds many marvels. Take a tour of the Arctic to discover the amazing and diverse adaptations of Arctic plants, "crawl beneath the ice" to investigate the Arctic Ocean's food web, and test your knowledge about species that are moving further and further north due to climate change.

## Arctic Peoples

This land is home to a number of peoples, who are observing and feeling the effects of climate change on a daily basis. Hear the voices of the Northern peoples, and appreciate their knowledge, unique culture and continued connection with the land and the ocean.

## Dimensions

5-6000 sq. ft.

## Rental Fee

\$150,000 USD plus inbound shipping  
Three month rental period

## Availability

Summer 2015 through Winter 2019

Arctic Voices is a co-production of the Canadian Museum of Nature and Science North.
