**NEW EXHIBITION  
NOW AVAILABLE**

## SPACE REQUIREMENTS

- a minimum of 800 m<sup>2</sup> of exhibition space
- a ceiling height of at least 6.50 m

## ANIMAL INSIDE OUT

is the latest exhibition from the creator of the BODY WORLDS phenomenon.

It is an unforgettable anatomical and sculptural menagerie, featuring the most revered species in the animal kingdom.

A penetrating look below the surface of the skin and fur allows a view of animal anatomy, never seen before. Better than any textbook, this fascinating exhibition shows the complex, intricate biology of the natural world's most remarkable creatures and the evolutionary intelligence of their nervous system, bones, muscles and organs.

ANIMAL INSIDE OUT has been successfully on display at several prime locations, including the venerable Natural History Museum in Vienna in 2010/11 and the Natural History Museum in London in 2011. A second version is now available for the European market.
