Facts and figures

Area: **400-600 m²**

(4 306 - 6,458 sq. ft.)

Number of exhibits: **23**

Maximal high: **5 m** (15 ft)

Target group: **6+**

FOCUS

Quality of life is closely linked to what we eat. Topic like food and eating in general is discussed on many levels and fields.

We are what we eat. Is that true or not? And what does it actually mean? Let's find that with Future on the plate exhibition.

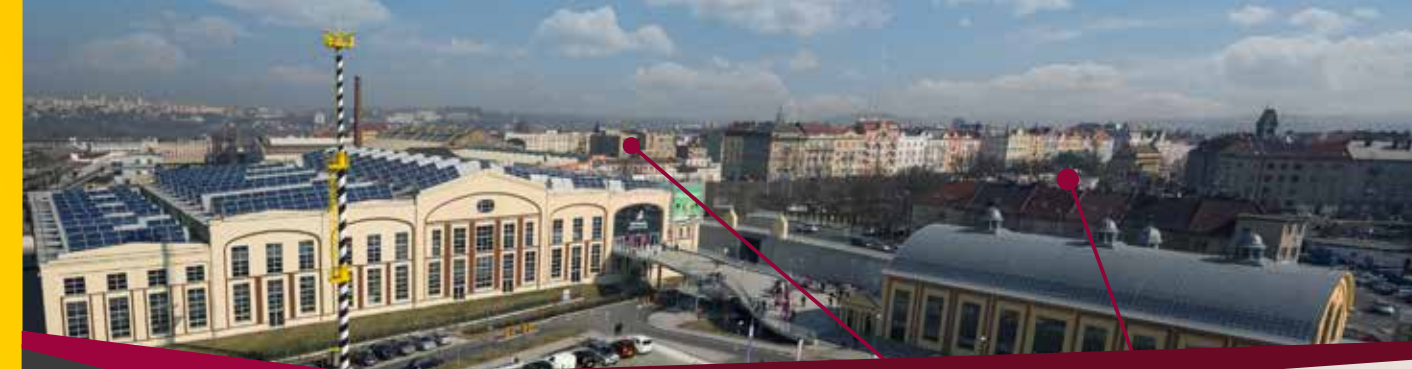

EDUCATIONAL AREA

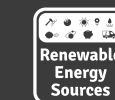

biology, sports, health education, history

TARGET GROUP

The exhibition is intended for the general public

TRAVELING EXHIBITION

THE
FUTURE
ON A PLATE

Are you curious of: How much chicken do we eat per second? What is growing on which plant? How much does your brain eat? Let's check it out with Future on the Plate

We eat to live, not the other way around. Every day, we have to provide nutrients and water to our bodies and this biological necessity has evolved into a cultural and industrial issue. Food has become one of the most important topics these days and its importance will only grow with the continued development of our society. An interactive TSC exhibition will guide visitors through the plethora of information related to food: how to create a balanced diet, how meat gets to our shops, how a microwave oven works, how long you have to run to burn calories from one chocolate bar and so on. We must not forget about the most important aspect: that the quality of our life depends on what we put on our plates.
